INVISIBLE ORTHODONTICS

Align your teeth, discreetly

A custom series of transparent trays, in high-tech medical plastic, that shift your teeth gradually – no wires, no brackets, and removable whenever you want.

22h	100%	0
WEAR / DAY	REMOVABLE	WIRES OR BRACKETS

YOUR BENEFITS

Why our patients choose aligners

100% removable to eat

Zero dietary restrictions: apples, popcorn, anything goes. You simply remove the trays during meals.

Simple, normal hygiene

You brush your teeth as usual. No wire to work around, no tricky trap zones to clean.

Nearly invisible, wireless

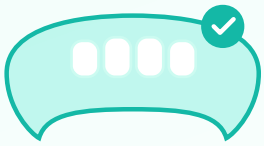
No wires that poke or brackets that cut. The edges are laser-polished to perfectly respect your gums.

DEAD SIMPLE

When to wear them, when to take them out

One easy rule: they stay in almost all the time. You only remove them in 3 situations.

✓ WEAR 22h



Keep them in for:

- ✓ All day long, at work and in class
- ✓ All night, while you sleep
- ✓ When drinking plain water (perfectly fine)

✕ REMOVE 2h

Take them out to:

- Eat anything you love
- Drink hot, sugary or colored drinks (coffee, tea…)
- Brush your teeth and your aligners

The rule that guarantees your result

The trays must be worn **22 hours a day**, removed only to eat and brush your teeth. That's the key to keeping treatment on track.

IN 4 MOVES

How do you put a tray in?

It's as simple as a 'click'. Here's exactly what you'll do, morning and night.

1 **Rinse**

Run the tray under cold water to freshen it up.

2 **Seat the front**

Place it onto your front teeth first.

3 **Press — click!**

Gently press with your fingertips along the sides and the back.

4 **Remove from the back**

To take it out, lift from the back teeth first.

You'll feel a gentle **"click"** when the tray is perfectly seated. No pain — just a snug, fitted feeling.

THE RESULT

The transformation, in pictures

YOUR JOURNEY

Your appointments, step by step

1

Consultation, 3D scan & simulation

30–45 min

- 3D intraoral scan
- On-screen before/after simulation

2

ClinCheck plan approval

20–30 min

- Reviewing the digital treatment plan
- Approval before manufacturing

3

First series + attachments & IPR

45 min

- Placing invisible attachments for grip
- Light interdental polishing if needed

4

Progress checks every 6–8 weeks

15–20 min

- Changing trays every 7-14 days at home
- Tracking progress

5

Finishing & refinement

30 min

- Final adjustments
- Fine-tuning the result

6

Retention phase

20–30 min

- Retention to stabilize the result for life
- Night retainer or discreet wire
